

Distribution and Manufacturing

SilPac distributes and manufactures complete solutions for Ultra high purity and industrial gas equipment. Our extensive experience with gas delivery systems for toxic, corrosive, flammable, and inert gas handling equipment helps us exceed all your gas delivery requirements.

High Purity Regulators, Valves, and System Components

1/4" thru 11/2" stainless steel and brass for the semi-conductor, life sciences, solar, and alternative fuel industry used for positive, vacuum and back pressure applications. System components, Valves, Vac Generators, Excess flow switches, check valves, and bulk delivery components also available.

Industrial Pressure Regulators

Predominantly in 316 SS, up to 1,380 bar (20,000 psi) with port sizes from 1/8" to 4". used on critical high-pressure control systems, like wellhead control panels, gas analyzers, hyperbaric diving systems and H2 fuel cell technology

Hydrogen Generators

Nel Hydrogen is an industry leader of Alkaline and Proton Exchange Membrane (PEM) water electrolysis. Nel electrolysis technology are robust, reliable, and energy efficient systems. Nel H2O electrolyzers, a superior choice for transport and Power-to-X applications. Multiple, scalable, modular product ranges to meet any customer requirements.

Gas Filters

GasPro/TEM Filters offers products in Teflon, stainless steel, and nickel mediums that are economically priced, have high efficiency, and low-pressure drops. Their flexible and streamline manufacturing processes allow for customization and non-standard applications for gas delivery systems.

High Purity and Instrumentation Fittings

Let-Lok compression pipe fittings, and adapters, HTC face seal fittings, and HTC mini weld fittings and adapters. Valves for UHP and Industrial applications

High Purity Valves

Specializes in valves, regulators, and components for high purity systems to support the specialty gas equipment industry. UHP valves incorporate a springless metal diaphragm design that is serviceable, modular and has replaceable seats.

Cylinder Connections

CGA/DISS connections and specialty gas components. Their complete line of cylinder connections includes a range of connection types to complete your gas delivery systems, including but not limited to; welded tube stub, pipe thread, compression, and face seal connections.

Gauges

Lower and center back mount configurations, face seal, and pipe thread connections. UHP transducers, absolute and gauge pressure, available in many ranges. Cylinder scales and displays. Many pressure measurement devices
